

Automatic Turnout Control for a Reversing Loop

Installation Instructions

Please read instructions completely before beginning your installation.

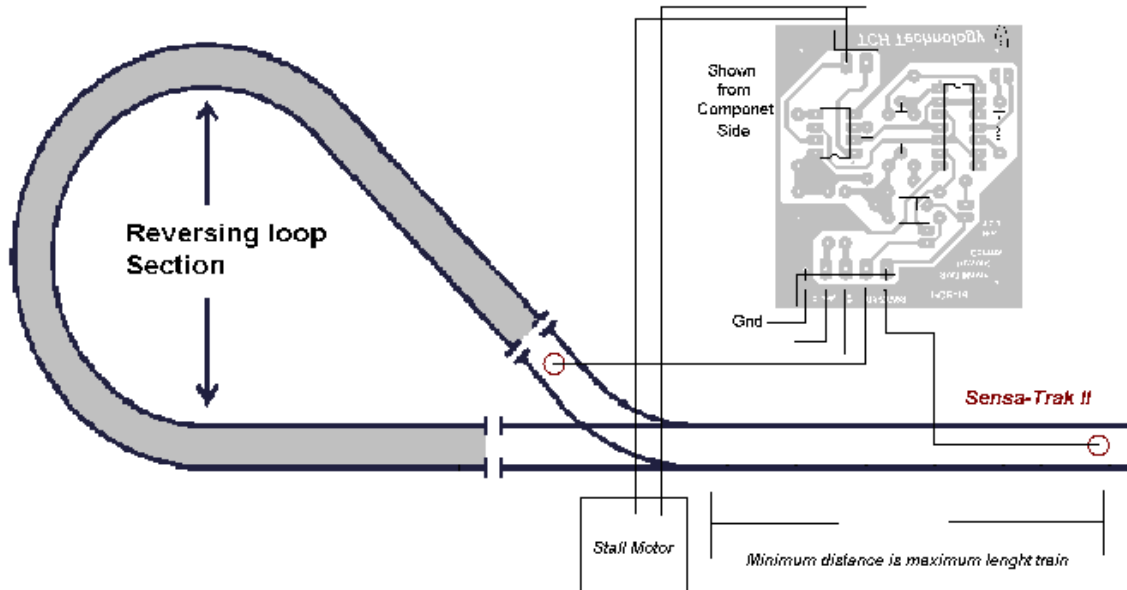

Do not use the output of a variable throttle for power to this circuit.

Description

The Automatic Turnout control is intended to be use for controlling your turnout in a reverse loop on your model railroad track. Installing these units along with our DC/DCC Automatic Reversing Unit will make your reverse loop completely automatic.

Installation

Installation of the Automatic Turnout control is simple and straight forward. By installing two Sensa-Trak II's in the appropriate positions the turn out can be controlled to move in the correct position. See Figure 1.

Connections

Follow the connections on the instructions provided with the Stall Motor Turnout Control.
